

PRE-SEED · SEPTEMBER 2026

Part 108 Drones need an agent to scale.

Commercial property owners are sitting on thousands of square feet of rooftop they can't monetize.

Aerospace + Silicon.

PROBLEM

Two markets that can't reach each other.

For property owners.

Commercial property owners sit on thousands of square feet of rooftop. Zero revenue.

Maintenance liability. The math to host a single operator never works alone, so nobody tries.

For operators.

Charging infrastructure is fragmented and proprietary. Every dock on the market works with one drone model. Mixed-fleet operators have no shared infrastructure to scale BVLOS.

SOLUTION

Introducing Outpost.

The agentic platform for drone ground infrastructure — one dock, any drone.

Become a Host.

Outpost agents check feasibility, handle compliance, and match with operators. You collect rent.

Scale your operation.

Bring your own dock or use ours. Land at every Outpost on the network through one API.

BUSINESS MODEL

The **network** is the business.

Our charging dock is the moat.

Fleet network

Operators pay a fee to access and recharge their drone on our docks.

Wholesale

Seeds installed base through partner drone OEMs, operators, and consumers.

Matching

Binds host supply to operator demand. One-time fee per match.

MARKET OPPORTUNITY

\$470B TAM.

TAM

\$470B

47M commercial drones by 2030

SAM

\$2B

~200K US commercial operators in BVLOS-ready segments

SOM

\$100M

5K earthity shared docks · \$20K avg annual revenue per dock

TRACTION

Commitments before the rule lands.
